

# Introducing Post-Consumer Recycled PET Jars

## An Environmentally-Conscious Approach to Plastic Packaging

### Wide range of applications.

Perfect for cannabis flower, topicals, and edibles. Also ideal for pharmaceutical and nutraceutical brands that package edibles, powders, ointments, gels, and creams.

### Switching is easy.

Since PCR PET jars are chemically and physically identical to traditionally manufactured PET, switching is as simple as approving an alternate material.

### More eco-friendly.

In a circular economy, making new jars from Post-Consumer Recycled (PCR) PET removes plastic from the environment by converting PET plastic discarded by the consumer back into resin that can be used again. Jars are fully recyclable in the PET recycle stream and are FDA-approved as well as ASTM-certified.

### Consistent look for different quantities.

**Available in three sizes:** 1 gram (74cc), 3.5 gram (93cc), and 7 gram (213cc). All are designed to work with our SecuRx® child resistant closures, providing brand consistency for your product.

### Maximize filling line efficiencies.

Each jar has a uniform diameter and a 53mm neck finish. These dimensional similarities eliminate the need for costly changeovers for closures and require no changes to filling line rails.

### Tamper evident security built in.

The molded shrink band bead creates a tamper evident security feature when the bottle is shrink wrapped to the closure. An optional heat induction liner is also available as a tamper evident feature.
